Range Extender Zi

Modern Smart Homes do not depend on expensive wires. They are wireless. That means, just like Wi-Fi or 4G, there are areas where the signal may not be optimal. Our Range Extender Zi fixes wireless weaknesses. Install the extender in a standard wall outlet, connect it to your gateway and the Range Extender Zi will start to optimize your Zigbee powered smart home. Thanks to its specialized antenna it repeats and amplifies Zigbee radio signals.

The Extender has up to 100m signal range and uses the latest Zigbee technology to let dead spots in your smart home be dead.

Range Extender Zi is fully Zigbee 3.0 and Works with SmartThings certified. It can be connected to most of the Zigbee empowered solutions like SmartThings or Homeassistant. Together with our Aeotec SmartThings products it perfects the smart home.
