

HOW TO CHANGE INTO PHOTOCELL MODE

CONTRL MODE

1. When power on, the PIR detector enters into the"WARM-UP" periods for about 10 seconds, then automatically change into AUTO MODE.
2. Change into PHOTOCELL MODE:adjust LUX to minimum,then by switching the ON/OFF main switch for 2 times within 5seconds (off-on-off-on), the PIR detector will automatically change into PHOTOCELL MODE from AUTO MODE. It can be adjusted with LUX switching,the effective range is from moon mark to sun mark 3lUX,or below you'll adjust to sun mark close,lamp will remain on.

3. During PHOTOCELL MODE or AUTO MODE, by switching off the ON/OFF main switch over 5 seconds and then on again, the PIR detector will reset to WARM-UP periods. Please note: the periods of "WARM-UP" maybe be shorter than 1 minute.
