

Heizkörper Montageanleitung

- Lesen Sie die Anleitung vor der Installation sorgfältig durch.
- Die Installation sollte von einer entsprechend qualifizierten Person durchgeführt werden.
- Entsorgen Sie die Verpackung auf verantwortungsvolle Weise

Werkzeuge

Ersatzteile

Pos.	Abbildung	Beschreibung	Anzahl
1		Blindstopfen	x3
2		Luftventil	x1
3		Schrauben und Dübel	x8
4		Lange Schrauben	x8
5		Halterung	x4
6		unterlegscheiben	x8
7		Gummidichtung	x4

Das Zubehör Nr. 1 (Blindstopfen) und Nr. 2 (Luftventil) sind bereits am Heizkörper vorinstalliert. Bitte passen Sie es während der Installation entsprechend an.

A

1. Installieren Sie 1 (Blindstopfen) und 2 (Luftventil) in der richtigen Position. (Abbildung I)

B

1. Wählen Sie eine geeignete Position und markieren Sie die Befestigungspunkte mit einem Bleistift.

C

1. Bohren Sie an der markierten Stelle ein Loch mit einer 8-mm-Bohrmaschine (Abbildung I).
2. Setzen Sie 3 (Dübel) in das 8-mm-Loch ein. (Abbildung II).
3. Schrauben Sie 4 (lange Schraube) durch 6 (Unterlegscheibe) und 5 (Halterungen) und ziehen Sie sie in 3 (Dübel) fest. (Abbildung III)

ACHTUNG: Befestigen Sie die unteren Halterungen nicht vollständig, da die Position des Heizkörpers während der Installation angepasst wird.

D

1. Befestigen Sie den Heizkörper an den oberen Halterungen (Abbildung I).
2. Stellen Sie die unteren Halterungen ein und befestigen Sie sie. Stellen Sie dann sicher, dass der Heizkörper sicher befestigt ist (Abbildung II).

E

1. Schließen Sie die Ventile und die Leitung vom Warmwasser an. Überprüfen Sie jede Verbindungsstelle und stellen Sie sicher, dass alle Teile korrekt befestigt sind.

F

1. Öffnen Sie nach der Installation das Ventil vom Warmwasser, um warmes Wasser einzufüllen.

ACHTUNG: Die Luft im Inneren sollte beim Öffnen des Warmwasserventils durch eine Entlüftung abgelassen werden.

Nach der Installation:

- Öffnen Sie mit einem Schraubendreher das Luftventil, öffnen Sie das Ventil und lassen Sie das Wasser in den Heizkörper strömen. Überprüfen Sie alle Anschlüsse, ob sie dicht sind.
- Sobald Wasser aus dem Luftventil überläuft, befindet sich keine Luft mehr in den Röhren.
- Mit einem Schraubendreher das Luftventil schließen, das Ventil einschalten und der Heizkörper ist jetzt betriebsbereit.

Pflege:

- Klassische Heizkörper bestehen aus verchromtem Stahl und sollten nicht mit ätzenden oder scheuernden Reinigungsmitteln gereinigt werden.

Bitte beachten Sie ...

- Dieses Produkt kann nur bei PN $\ll 0.6\text{MPa}$ (6g/cm^2 , 6Bar) verwendet werden. Es sollte nur mit Wasser gefüllt werden und bei einer Temperatur unter 100°C (212°F). In der folgenden Tabelle finden Sie die Installationsanforderungen.
- Wenn die Temperatur 48°C (oder 120°F) überschreitet, zeigen Sie bitte ein Warnschild in der Nähe des Produkts, um Verbrennungen und Schelteinwirkungen zu vermeiden.

Füllen Sie 3/4 voll	Druck	Temperatur	Bemerkungen
Nur Wasser	PN $\leq 0.6\text{ Mpa}$	$0^\circ\text{C} < t \leq 100^\circ\text{C}$	Wenn die Umgebungstemperatur unter 1°C fällt, lassen Sie das Wasser ab, um ein Einfrieren zu verhindern.

Radiator installation instructions

- Read the instructions carefully before installation.
- Installation should be carried out by a suitably qualified person.
- Dispose of the packaging responsibly

Tools

Spare parts

Item	Illustration	Description	Quantity
1		Dummy plug	x3
2		Air valve	x1
3		Screws Dowels	x8
4		Long screws	x8
5		Bracket	x4
6		Washers	x8
7		Rubber Gasket	x4

The accessories No.1(blind plug) and No.2(air valve) are already pre-installed on the heater body. Please adjust them accordingly during installation.

A

1.Install1(blind plug)and 2(air valve)in the correct position.(Figure I)

B

1.Choose a suitable position and mark the fixing points with a pencil.

C

1.Drill a hole at the marked location using an 8 mm drill(Figure I).
2.Insert 3(dowels) into the 8 mm hole.(Figure II).
3.screw4(long screw) through6(washer)and5 (brackets)and tighten in 3(dowel).(FigureIII).

CAUTION: Do not fully fix the bottom brackets as the position of the radiator will be adjusted during installation.

D

1. Fix the radiator to the upper brackets (Figure I).
2. Adjust and fasten the lower brackets. then make sure that the radiator is securely fastened (Figure II).

E

1. Connect the valves and the pipe from the hot water. Check each connection point and make sure that all parts are correctly fastened.

F

1. After installation, open the valve from the hot water to fill hot water.

ATTENTION: The air inside should be released by venting when opening the hot water valve.

After installation:

- Open the air valve with a screwdriver, open the valve and let the water flow into the radiator. Check that all connections are tight.
- Once water overflows from the air valve, there is no more air in the tubes.
- Use a screwdriver to close the air valve, turn on the valve and the radiator is now ready for use.

Maintenance:

- Classic radiators are made of chrome-plated steel and should not be cleaned with corrosive or abrasive cleaning agents.

Please note

- This product can only be used at PN 《0.6MPa (6g / cm² ,6 Bar) It should only be filled with water and at a temperature below 100° C(212° F).Refer to the following table for installation requirements.
- If the temperature exceeds 48° C(or 120° F), please display a warning sign near the product to prevent burns and exposure to radiation.

Fill 3/4 full	Pressure	Temperature	Remarks
Water only	PN≤0.6Mpa	0°C<t≤100°C	If the ambient temperature drops below 1° C, drain the water to prevent freezing.

Instructions d'installation du radiateur

- Lisez attentivement les instructions avant l'installation.
- L'installation doit être effectuée par une personne dûment qualifiée.
- Jetez l'emballage de manière responsable

Outils

Pièces détachées

Article	Illustration	Description	Quantité
1		Bouchon factice	x3
2		Valve d'air	x1
3		Vis et chevilles	x8
4		Vis longues	x8
5		Support	x4
6		Rondelles	x8
7		Joint en caoutchouc	x4

Les accessoires No.1(bouchon) et No.2(vanne d'air) sont déjà pré-installés sur le corps du réchauffeur, veuillez les ajuster en conséquence pendant l'installation.

A

1.Installez1(bouchon borgne)et2(vanne d'air)dans la bonne position.(Figure I)

B

1.Choisissez une position appropriée et marquez les points de fixation avec un crayon.

C

1.Percez un trou à l'endroit marqué à l'aide d'un foret de 8 mm (figure I).
2.Insérez 3 (chevilles) dans le trou de 8 mm (Figure II).
3.Visser4(vis longue) à travers6(rondelle)et5 (supports)et serrer dans 3(cheville).(FigureIII).

ATTENTION: Ne fixez pas complètement les supports inférieurs car la position du radiateur sera ajustée pendant l'installation.

Après l'installation:

- Ouvrez la vanne d'air à l'aide d'un tournevis, ouvrez la vanne et faites couler l'eau dans le radiateur. Vérifiez que tous les raccords sont étanches.
- Dès que l'eau déborde de la vanne d'air, il n'y a plus d'air dans les tubes.
- Fermez la vanne d'air à l'aide d'un tournevis, mettez la vanne en marche et le radiateur est prêt à fonctionner.

Entretien:

- Les radiateurs classiques sont en acier chromé et ne doivent pas être nettoyés avec des produits corrosifs ou abrasifs.

Veuillez noter

- Ce produit ne peut être utilisé qu'à PN 《0.6MPa (6g / cm² ,6bar) Il ne doit être rempli que d'eau et à une température inférieure à 100° C(212° F).Le tableau suivant indique les exigences d'installation.
- Si la température dépasse 48° C (ou 120° F),veuillez afficher un panneau d'avertissement à proximité du produit pour éviter les brûlures et les effets de la chaleur.

Remplir aux 3/4	Pression	Température	Remarques
Eau seulement	PN≤0.6Mpa	0° C<t≤100° C	Si la température ambiante descend en dessous de 1° C, vidangez l'eau pour éviter le gel.

Instrucciones de instalación del radiador

- Lea atentamente las instrucciones antes de la instalación.
- La instalación debe ser realizada por una persona debidamente cualificada.
- Elimine el embalaje de forma responsable

Broca de 8,0 mm

Taladro eléctrico

Piezas de recambio

Artículo	Ilustración	Descripción	Cantidad
1		Tapón falso	x3
2		Válvula de aire	x1
3		Tornillos y tacos	x8
4		Tornillos largos	x8
5		Soporte	x4
6		Arandelas	x8
7		Junta de goma	x4

Los accesorios No. 1 (tapón ciego) y No. 2 (válvula de aire) ya están preinstalados en el cuerpo del calentador.

A

1. Instale 1 (tapón ciego) y 2 (válvula de aire) en la posición correcta. (Figura I)

B

1. Elija una posición adecuada y marque los puntos de fijación con un lápiz.

C

1. Haga un agujero en el lugar marcado con una broca de 8 mm (Figura I).
2. Inserte 3 (clavijas) en el agujero de 8 mm. (Figura II).
3. Atornille 4 (tornillo largo) a través de 6 (arandela) y 5 (soportes) y apriete en 3 (clavija). (Figura III).

PRECAUCIÓN: No fije completamente los soportes inferiores ya que la posición del radiador se ajustará durante la instalación.

Después de la instalación:

- Abra la válvula de aire con un destornillador, abra la válvula y deje que el agua fluya hacia el radiador. Compruebe que todas las conexiones están apretadas.
- Una vez que el agua se desborda de la válvula de aire, no hay más aire en los tubos.
- Utilice un destornillador para cerrar la válvula de aire, encienda la válvula y el radiador ya está listo para su uso.

Mantenimiento:

- Los radiadores clásicos son de acero cromado y no deben limpiarse con productos de limpieza corrosivos o abrasivos.

Tenga en cuenta

- Este producto sólo puede utilizarse con PN 《0.6MPa (6g / cm² ,6 Bar) Sólo debe llenarse con agua y a una temperatura inferior a 100° C(212° F).Consulte la siguiente tabla para conocer los requisitos de instalación.
- Si la temperatura supera los 48° C(o 120° F), coloque un cartel de advertencia cerca del producto para evitar quemaduras y exposición a la radiación.

Llenar 3/4 de su capacidad	Presión	Temperatura	Observaciones
Sólo agua	PN≤0.6Mpa	0°C<t≤100°C	Si la temperatura ambiente desciende por debajo de 1° C, drene el agua para evitar la congelación.

Istruzioni per l'installazione del radiatore

- Leggere attentamente le istruzioni prima dell'installazione.
- L'installazione deve essere eseguita da una persona adeguatamente qualificata.
- Smaltire l'imballaggio in modo responsabile

Strumenti

Pezzi di ricambio

Voce	Illustrazione	Descrizione	Quantità
1		Tappo cieco	x3
2		Valvola dell'aria	x1
3		Viti e tasselli	x8
4		Viti lunghe	x8
5		Staffa	x4
6		rondelle	x8
7		Guarnizione in gomma	x4

Gli accessori n. 1 (tappo cieco) e n. 2 (valvola dell'aria) sono già preinstallati sul corpo del riscaldatore; si prega di regolarli di conseguenza durante l'installazione.

A

1. Installare 1 (tappo cieco) e 2 (valvola dell'aria) nella posizione corretta. (Figura I)

B

1. Scegliere una posizione adatta e segnare i punti di fissaggio con una matita.

C

1. Praticare un foro nel punto contrassegnato utilizzando una punta da 8 mm (Figura I).
2. Inserire 3 (tasselli) nel foro da 8 mm. (Figura II).
3. Avvitare 4 (vite lunghe) attraverso 6 (rondella) e 5 (staffe) e serrare in 3 (tassello). (Figura III).

ATTENZIONE: Non fissare completamente le staffe inferiori perché la posizione del radiatore verrà regolata durante l'installazione.

Dopo l'installazione:

- Aprire la valvola di sfiato con un cacciavite, aprire la valvola e far fluire l'acqua nel radiatore. Controllare che tutti i collegamenti siano ben saldi.
- Quando l'acqua trabocca dalla valvola dell'aria, non c'è più aria nei tubi.
- Chiudere la valvola dell'aria con un cacciavite, riaccendere la valvola e il radiatore è pronto per l'uso.

Manutenzione:

- I radiatori classici sono realizzati in acciaio cromato e non devono essere puliti con detergenti corrosivi o abrasivi.

Si prega di notare

- Questo prodotto può essere utilizzato solo a PN $\leq 0.6\text{MPa}$ (6g / cm² , 6 Bar) e deve essere riempito solo con acqua e a una temperatura inferiore a 100° C. Fare riferimento alla seguente tabella per i requisiti di installazione.
- Se la temperatura supera i 48° C (o 120° F), esporre un cartello di avvertimento vicino al prodotto per evitare ustioni e l'esposizione alle radiazioni.

Riempire per 3/4	Pressione	Temperatura di esercizio	Osservazioni
Solo acqua	$\text{PN} \leq 0.6\text{Mpa}$	$0^{\circ}\text{C} < t \leq 100^{\circ}\text{C}$	Se la temperatura ambiente scende sotto 1° C, scaricare l'acqua per evitare il congelamento.
