App Control Instructions:

Preparation:

**Download the V-TAC SMART APP on your mobile phone
(Scan the QR code to download the app)**

IOS APP

ANDROID APP

Operating Steps:

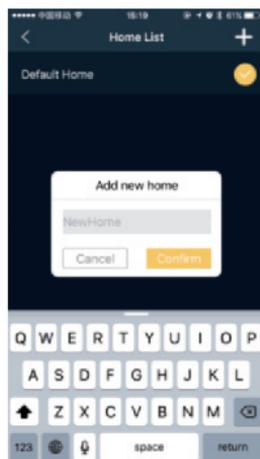

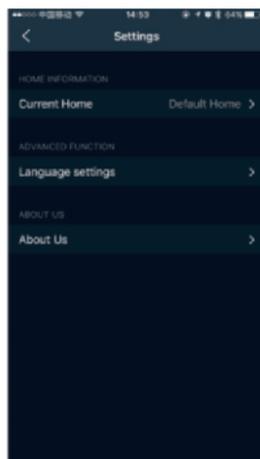

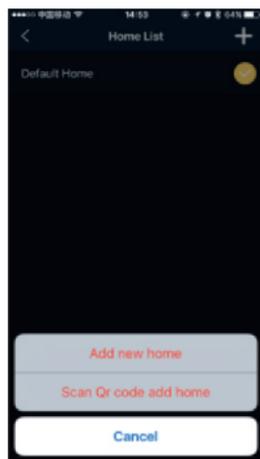

- 1. Turn ON Bluetooth on your device and open the V-TAC SMART APP. The app will automatically search and connect the floodlight.**
- 2. The user should open the " " settings function and tap on home information in order to create a new home. Tap on the "+" sign to Add new home, the app will automatically search all the lighting devices. If the bluetooth connection is not stable switch OFF and ON the application again.**
- 3. Connected to the network device will get device type. If there is unknown device type or no name of equipment, switch ON/OFF device again, then software will take initiative to type of access equipment.**

Family Functions:

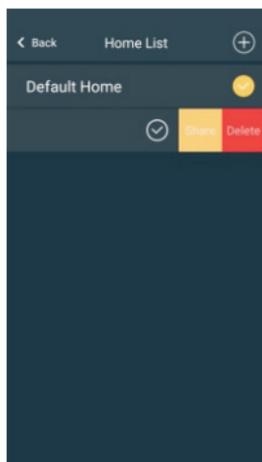

Family function is mainly used by the users who has multiple rooms to manage and control all devices flexibly and efficiently. As well as switch to corresponding home based on the actual situation. Once the user establishes family, it will be benefited for encrypt controlled individual family device. This makes the person without authorization unable to access the family device.

Create Home:

In the control interface, current home directly shows the connected family name. After leaving the device turns itself into a default home. In the setting page, switch to the current home menu and enter in the home list. Here the user can create different homes as and share these homes with there family members.

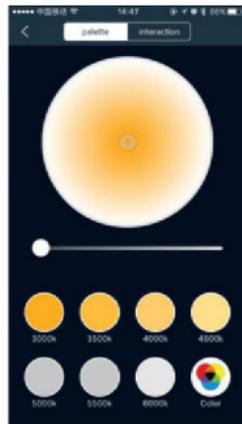

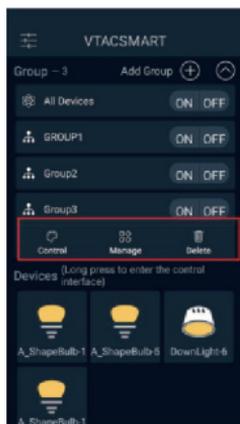

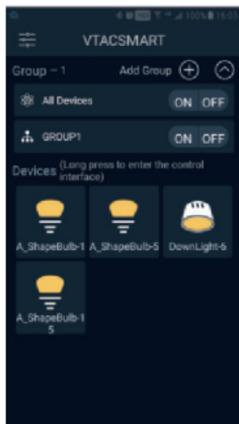

1. Click on the upper right corner of the setting interface "+" icon. The user can add new home and search all lighting devices to his home

2. If the devices have been added in the users new home, they would not be shown on the other family members device. The user can use his device and share the QR code with them. The other family members can click on the upper right corner of the setting interface, tap "+" icon to view option of add new home OR scan QR code to get the devices from the users home.

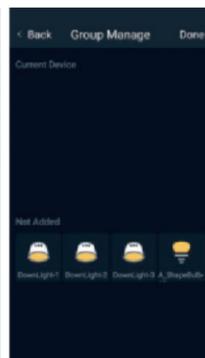

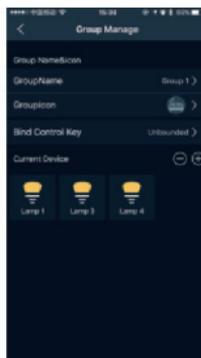

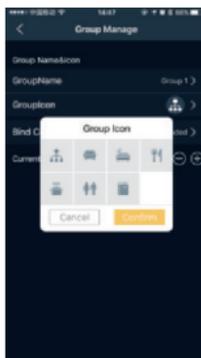

Operating Equipment:

The App control interface is mainly divided into two parts -Rooms & devices. Each group can be independently controlled as well as single device operation, can only control single unit.

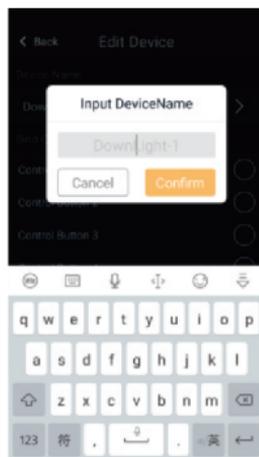

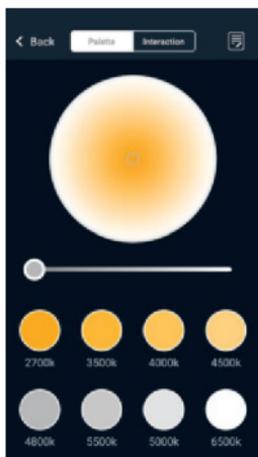

1. The Group operation is divided into 4 parts - "ON/OFF", "Control", "Manage" & "Delete Group"
2. The single device operation consist of ON/OFF , Control, locator device, rename, join room etc
3. All controlled groups can be hidden up or spread by click on the group title.

Group Operations:

1. Press On/OFF key to control the Group manage page.
2. Tap one group, you can see the manage function to enter the group manage interface, then rename the Group name and select the preferred group icon. You can also select the current devices to this group.
3. Tap control key, to adjust/switch color temperature, Dim the light

Single Device Operation:

1. Press ON/OFF key, when the device is loaded for the first time, if connection failed, press device icon to get the device again.
2. If not ensure the device type, double click device icon, locate the device.
3. Long press enter the control interface of the device, then adjust the CCT/ brightness of the device.(Remark: Limited to CCT adjustment function, RGB is not workable)
4. In the control interface, click on the upper right icon of the device to setting button, the user can modify the device name.
